

-Press Release-

NZ Communications, the new entrant in the mobile phone market, selects Pulse Networks as one of its Planning and Design Consultants.

30 October 2008

NZ Communications has awarded Pulse Networks a contract to provide planning and design services for the roll-out of a new Mobile Phone network in New Zealand. This work involves RMA Planning, Surveying, Structural and Electrical Engineering, Project Management and CAD drafting and it was Pulse Networks ability to pull together a multi disciplined team that was successful.

“Having worked on many large Telecommunications Infrastructure projects throughout NZ helps a lot when bidding for this type of work” says Pulse Managing Director Ian Neary, “Being able to appreciate the clients changing needs and keeping a consistent standard of work are key to growing your business in a very competitive environment”

“I received a drawing from pulse on site 006-008, this is the first drawing I have seen by them and the quality of the drawing was fantastic. Little things that were included on the plans including the surrounding sites, facilities on these sites (and their elevations), vegetation, existing telecommunications facilities on neighbouring sites, the heights and distances of these existing facilities from the proposed NZCL site and having buildings and vegetation included in the elevations made writing the report very easy for us.” - Janelle Smith, Environmental Planner.
